- Cross-Browser Issues. Different browsers work differently. ...
- Security Issues. Security is important in today's world driven by technology and data. ...
- Extra Work for Developers.

What is the difference between CSS2 and CSS3?

- Unlike CSS2, which was comprised of a single document, CSS3 has its specifications divided into many individual modules, which makes CSS3 a whole lot easier to handle. With CSS3, the designers can now use special fonts, like those available in Google Fonts and Typecast.

Name a few CSS style components

- = At its most basic level, CSS consists of two components:
- Properties: These are human-readable identifiers that indicate which stylistic features you want to modify. For example, font-size , width , background-color .
- Values: Each property is assigned a value. This value indicates how to style the property.

What do you understand by CSS opacity?

- The opacity CSS property sets the opacity of an element. Opacity is the degree to which content behind an element is hidden, and is the opposite of transparency.

How can the background color of an element be changed?

- To add background color in HTML, use the CSS background-color property. Set it to the color name or code you want and place it inside a style attribute. Then add this style attribute to an HTML element, like a table, heading, div, or span tag.

How can image repetition of the backup be controlled?

- To control the repetition of an image in the background, use the background-repeat property. You can use no-repeat value for the background-repeat property if you do not want to repeat an image, in this case, the image will display only once.

What is the use of the background-position property?

- Definition and Usage
- The background-position property sets the starting position of a background image. Tip: By default, a background-image is placed at the top-left corner of an element, and repeated both vertically and horizontally.

Which property controls the image scroll in the background?

- Background - attachment property
- The background-attachment property sets whether a background image scrolls with the rest of the page, or is fixed.

Why should background and color be used as separate properties?

- Why background and color are the separate properties if they should always be set together? There are two reasons behind this: It enhances the legibility of style sheets. The background property is a complex property in CSS, and if it is combined with color, the complexity will further increase.

How to center block elements using CSS1?

- With css the way to center anything that's a block level element is with the margin property. One of the values of margin is auto and by setting auto on the left and right margin our block level element will center itself.

How to maintain the CSS specifications?

- The CSS specifications are maintained by the World Wide Web Consortium (W3C)

What are the ways to integrate CSS as a web page?

- CSS may be added to HTML in three different ways. To style a single HTML element on the page, use Inline CSS in a style attribute. By adding CSS to the head section of our HTML document, we can embed an internal stylesheet. We can also connect to an external stylesheet that separates our CSS from our HTML.

What is embedded style sheets?

- Embedded style sheets allow you to define styles for the whole HTML document in one place. Embedded style sheets refer to when you embed style sheet information into an HTML document using the <style> element.

What are the external style sheets?

- An external style sheet is a separate CSS file that can be accessed by creating a link within the head section of the webpage. Multiple webpages can use the same link to access the stylesheet. The link to an external style sheet is placed within the head section of the page.

What are the advantages and disadvantages of using external style sheets?

- External style sheets have the following advantages over internal and inline styles:
 - one change to the style sheet will change all linked pages.
 - you can create classes of styles that can then be used on many different HTML elements.
 - consistent look and feel across multiple web pages.

What is the meaning of the CSS selector?

- A CSS selector is the first part of a CSS Rule. It is a pattern of elements and other terms that tell the browser which HTML elements should be selected to have the CSS property values inside the rule applied to them.

What are the media types allowed by CSS?

- CSS 2.1 defines the following media groups:

- continuous or paged.
- visual, audio, speech, or tactile.
- grid (for character grid devices), or bitmap.
- interactive (for devices that allow user interaction), or static (for those that do not).
- all (includes all media types)

What is the rule set?

- A table of instructions used by a controlled interface to determine what data is allowable and how the data is handled between interconnected systems.

Create Layouts
